## B. PRESENTLY PENDING CLAIMS

The claims have not been amended herein. This listing of claims is provided for the Examiner's convenient reference.

## 1-22. (Canceled)

23. (Previously Presented) A method of reducing the incidence of post-operative adhesions in a body cavity, comprising introducing into the body cavity a composition comprising an aqueous formulation further comprising a polysaccharide dextrin in an amount effective to reduce the incidence of said post-operative adhesions, wherein the dextrin is unsubstituted and the dextrin contains more than 15% of polymers with a degree of polymerization (DP) greater than 12 and acts as an osmotic agent to maintain a volume of the aqueous formulation in the body cavity serving to separate tissues which otherwise may adhere to each other, and wherein the aqueous formulation is a solution in the body cavity and remains in the body cavity for at least 2 days.

## 24-25. (Canceled)

- 26. (Previously Presented) A method according to Claim 23 wherein said composition is applied to the appropriate body cavity after a surgical operation has been carried out.
- 27. (Previously Presented) A method according to Claim 23 wherein the aqueous formulation remains in the body cavity for a minimum of 2 to 3 days.
- 28. (Previously Presented) A method according to Claim 23 wherein the aqueous formulation remains in the body cavity over the period during which fibrin exudation is at a maximum.
- 29. (Previously Presented) A method according to Claim 23 wherein the aqueous formulation remains in the body cavity for a period of up to 7 to 8 days in order to allow restoration of non-stick surfaces.
- 30. (Previously Presented) A method according to Claim 23 wherein the composition is applied to the body cavity in a volume in the range of 500-2000 ml.

- 31. (Previously Presented) A method according to Claim 23 wherein the composition is applied to the body cavity in a volume in the range of 1000 ml-1500 ml.
- 32. (Previously Presented) A method according to Claim 23 wherein the dextrin is applied to the appropriate body cavity in differing concentrations over a concentration range of 2.5-18 % weight to volume of the composition.
- 33. (Previously Presented) A method according to Claim 32 wherein the dextrin is applied to the appropriate body cavity in differing concentrations over a concentration range of 35 % weight to volume of the composition.
- 34. (Previously Presented) A method according to Claim 32 wherein the dextrin is applied to the appropriate body cavity in an amount of about 4 % weight to volume of the composition.
- 35. (Previously Presented) A method according to Claim 23 wherein the concentration range of the dextrin is selectively altered over a period of time.

## 36-44. (Canceled)

- 45. (Previously Presented) A method according to Claim 23 wherein the aqueous formulation remains in the body cavity for a period of up to 3 to 4 days in order to allow restoration of non-stick surfaces.
- 46. (Previously Presented) A method according to Claim 23 wherein the aqueous formulation largely holds in place over the period the aqueous formulation resides in the body cavity.
- 47. (Previously Presented) A method according to Claim 23 wherein the body cavity is a peritoneal cavity.
- 48. (Previously Presented) A method according to Claim 26 wherein the appropriate body cavity is a peritoneal cavity.
- 49. (Previously Presented) A method according to Claim 45 wherein the body cavity is a peritoneal cavity.

- 50. (Previously Presented) A method according to Claim 46 wherein the body cavity is a peritoneal cavity.
- 51. (Previously Presented) A method of reducing the incidence of post-operative adhesions in a body cavity, comprising introducing into the body cavity a composition comprising an aqueous formulation further comprising a polysaccharide dextrin in an amount effective to reduce the incidence of said post-operative adhesions, wherein the dextrin is unsubstituted and the dextrin contains more than 15% of polymers with a degree of polymerization (DP) greater than 12 and acts as an osmotic agent to maintain a volume of the aqueous formulation in the body cavity serving to separate tissues which otherwise may adhere to each other, and wherein:
- (a) the aqueous formulation is a solution in the body cavity, remains in the body cavity for at least 2 days and is not removed;
- (b) the dextrin is applied to the body cavity in an amount of about 4 % weight to volume of the composition; and
  - (c) the composition is administered intraperitoneally.
- 52. (Previously Presented) The method of claim 23 wherein the composition is introduced into the body cavity when the operation is an abdominal operation.
- 53. (Previously Presented) The method of claim 23 wherein the composition is introduced into the body cavity when the operation is a gynecological operation.
- 54. (Previously Presented) The method of claim 34 wherein the body cavity is a peritoneal cavity.
- 55. (Previously Presented) The method of claim 51 wherein the body cavity is a peritoneal cavity.
- 56. (Previously Presented) The method of claim 51 wherein the composition is introduced into the body cavity after an abdominal operation has been carried out.
- 57. (Previously Presented) A method of reducing the incidence of post-operative adhesions in a body cavity, comprising:

- (a) introducing into the body cavity a composition comprising an aqueous formulation further comprising a polysaccharide dextrin in an amount effective to reduce the incidence of said post-operative adhesions, wherein the dextrin is unsubstituted and the dextrin contains more than 15% of polymers with a degree of polymerization (DP) greater than 12 and acts as an osmotic agent to maintain a volume of the aqueous formulation in the body cavity serving to separate tissues which otherwise may adhere to each other, and wherein the aqueous formulation is a solution in the body cavity; and
- (b) allowing the aqueous formulation to remain in the body cavity for at least 2 days, wherein the aqueous formulation is not removed from the body cavity.
- 59. (Previously Presented) The method of claim 57 wherein body cavity is a peritoneal cavity.
- 60. (Previously Presented) The method of claim 57 wherein the composition is introduced into the body cavity when the operation is an abdominal operation.
- 61. (Previously Presented) The method of claim 57 wherein the composition is introduced into the body cavity when the operation is a gynecological operation.
- 62. (Previously Presented) The method of claim 57 wherein said composition is applied to the appropriate body cavity after a surgical operation has been carried out.
- 63. (Previously Presented) The method of claim 57 wherein a volume of the aqueous formulation remains in the body cavity for a minimum of 2 to 3 days.
- 64. (Previously Presented) The method of claim 57 wherein the composition is applied to the body cavity in a volume in the range of 500-2000 ml.
- 65. (Previously Presented) The method of claim 57 wherein the composition is applied to the body cavity in a volume in the range of 1000 m1-1500 ml.
- 66. (Previously Presented) The method of claim 57 wherein the dextrin is applied to the appropriate body cavity in an amount of about 4 % weight to volume of the composition.
  - 67. (Previously Presented) The method of claim 65 wherein the body cavity is a

peritoneal cavity.

- 68. (Previously Presented) A method of reducing the incidence of post-operative adhesions in a body cavity, comprising introducing into the body cavity a composition comprising an aqueous formulation further comprising a polysaccharide dextrin in an amount effective to reduce the incidence of said post-operative adhesions, wherein the dextrin is unsubstituted and the dextrin contains more than 15% of polymers with a degree of polymerization (DP) greater than 12 and acts as an osmotic agent to maintain a volume of the aqueous formulation in the body cavity serving to separate tissues which otherwise may adhere to each other, and wherein the aqueous formulation is a solution in the body cavity administered under surgical conditions and the aqueous formulation remains in the body cavity and is not removed.
- 68. (Previously Presented) The method of claim 67 wherein the body cavity is a peritoneal cavity.
- 69. (Previously Presented) The method of claim 67 wherein the surgical condition is an abdominal surgery.
- 70. (Previously Presented) The method of claim 67 wherein the surgical condition is a gynecological surgery.
- 71. (Previously Presented) The method of claim 67 wherein said composition is applied to the appropriate body cavity after a surgical operation has been carried out.
- 72. (Previously Presented) The method of claim 67 wherein the aqueous formulation remains in the body cavity for a minimum of 2 to 3 days.
- 73. (Previously Presented) The method of claim 67 wherein the composition is applied to the body cavity in a volume in the range of 500-2000 ml.
- 74. (Previously Presented) The method of claim 67 wherein the composition is applied to the body cavity in a volume in the range of 1000 m1-1500 ml.
- 75. (Previously Presented) The method of claim 66 wherein the dextrin is applied to the appropriate body cavity in an amount of about 4 % weight to volume of the composition.

- 76. (Previously Presented) The method of claim 75 wherein the body cavity is a peritoneal cavity.
- 77. (Previously Presented) A method of reducing the incidence of post-operative adhesions in a body cavity, comprising introducing into the body cavity a composition comprising less than 2000 ml of an aqueous formulation further comprising a polysaccharide dextrin in an amount effective to reduce the incidence of said post-operative adhesions, wherein the dextrin is unsubstituted and the dextrin contains more than 15% of polymers with a degree of polymerization (DP) greater than 12 and acts as an osmotic agent to maintain a volume of the aqueous formulation in the body cavity serving to separate tissues which otherwise may adhere to each other, and wherein the aqueous formulation is a solution in the body cavity and the aqueous formulation remains in the body cavity and is not removed.
- 78. (Previously Presented) The method of claim 77 wherein the composition is introduced into the body cavity when the operation is an abdominal operation.
- 79. (Previously Presented) The method of claim 77 wherein the composition is introduced into the body cavity when the operation is a gynecological operation.
- 80. (Previously Presented) The method of claim 77 wherein said composition is applied to the appropriate body cavity after a surgical operation has been carried out.
- 81. (Previously Presented) The method of claim 77 wherein at least a portion of the volume of the aqueous formulation remains in the body cavity for a minimum of 2 to 3 days.
- 82. (Previously Presented) The method of claim 77 wherein the dextrin is applied to the appropriate body cavity in an amount of about 4 % weight to volume of the composition. (Previously Presented) The method of claim 82 wherein the body cavity is a peritoneal cavity.
